isotype	Species Reactivity	Applications	Moi. Weight	Ref.Cell Line	Epitope	ımmunogen	
IgG2a	human, mouse, rat, dog	WB, ELISA	45 kDa	HepG2	activation loop (phosphorylation independent)	peptide conjugated to KLH	

Background and Specificity:

MEK (MAP Kinase Kinase) phosphorylates the MAP Kinase on both threonine and tyrosine residues of the activation motif TEY. MEK1 and MEK2 are activated by phosphorylation of two serine residues (Ser 218/222 in MEK1 and Ser 222/226 in MEK2). These phosphorylation sites are substrates of the Raf family of kinases.

Mab MEK1/2-9G3 specifically recognizes the activation loop of MEK1/2 independent of its phosphorylation status. The antibody is suitable for Western Blot and ELISA applications.

The antibody was purified from serum-free cell culture **Purification:**

supernatant by subsequent thiophilic adsorption and size

exclusion chromatography

Formulation: lyophilized from 1 ml PBS / 0.09 % Na-azide / PEG and

Sucrose.

Reconstitute with 1 ml H₂O (15 min, RT) Reconstitution:

For long-term storage, freeze lyophilizate upon arrival (-20°C). Stability:

Upon reconstitution, aliquote and freeze in liquid nitrogen; reconstituted antibody can be stored frozen at -80°C up to 1 year. Thaw aliquots at 37°C. Thawed aliquots may be stored at 4°C up to

3 months.

Avoid repeated freeze / thaw cycles.

#0811: Cell lysate from untreated HepG2 cells **Positive Control:**

Immunoblotting: 0.5 µg/ml for HRPO/ECL detection

> Recommended blocking buffer: Casein/Tween 20 based blocking and blot incubation buffer, e.g. nanoTools product

#3031-500/CPPT or #3031-3000/CPPT.

Immunoprecipitation: ND ND Immunocytochemistry:

0.1 µg/ml (protein ELISA); capture ELISA: N.D. ELISA:

> All products are supplied for research and investigational use only. Not for use in humans or laboratory animals.

Detection of endogenous MEK1/2

Whole cell lysates of serum starved tumor cells (20.000 cells per lane) were applied to SDS-PAGE and transferred to a PVDF membrane. The immunoblot was probed with mab MEK1/2-963 (0.5 µg/ ml) for 1h at RT and developed by ECL (exp. time: 30 sec).
