

Mouse Monoclonal Antibody to

Amyloid βA4 (40/42), C-Terminus

clone 9F1

Order No.:	0062-100/bA4(40/42)-9F1			
Size (ug)	100			

Size (µg) Lot No.:

ELISA:

0062S

Lot No.:		0062S				02/020307F		
Isotype	Species Reactivity	Applications	Mol. Weight	Ref.Cell Line	Epitope		Immunogen	
lgG1	human	ELISA, WB, ICC		none	near C-Termin Amyloid βA4 (βA4 (1-42); crossreacts w	(1-40) <u>and</u>	C-terminal peptide conjugated to KLH	
Background and Specificity:						Related Products		
The beta-amyloid peptide (beta A4), proteolytically released from the amyloid precursor protein (APP), is the principal component of senile plaques in Alzheimer's disease. Cleavage of APP by alpha-secretase or alternatively by beta-secretase leads to generation and extracellular release of soluble APP peptides, S-APP-alpha and S-APP-beta, respectively, and the retention of corresponding membrane-anchored C-terminal fragments, C83 and C99. Subsequent processing of C83 by gamma-secretase yields P3 peptides. This is the major secretory pathway and is nonamyloidogenic. Alternatively, presenilin/nicastrin-mediated gamma-secretase processing of C99 releases the amyloid beta proteins, amyloid-beta 40 (Abeta40) and amyloid-beta 42 (Abeta42), major components of amyloid plaques, and the cytotoxic C-terminal fragments, gamma-CTF(50), gamma-CTF(57) and gamma-CTF(59). Mab βA4(40/42)-9F1 interacts with the C-termini of both β-Amyloid (1 - 40) and (1-42).						mab to βA4, N-Terminus #0064-100/bA4N-19H5 mab to βA4, N-Terminus #0084-100/bA4N-19H11 mab to βA4, N-Terminus #0195-100/bA4N-7F4 mab to βA4, N-Terminus #0196-100/bA4N-7F9 mab to βA4, N-Terminus #0197-100/bA4N-7F9 mab to βA4, N-Terminus #0197-100/bA4N-7F9 mab to βA4 (1-40), C-Terminus #0060-100/bA4N-11H3 mab to βA4 (1-40), C-Terminus #0060-100/bA4(40)-5C3 mab to βA4 (1-42), C-Terminus #0061-100/bA4(42)-8G7
